Team load by hour — four ways to show it

Date: 31 Aug 2026 · Whole team (6 analysts) · 30 fund-days

MOCKUP — simulated data, not your results

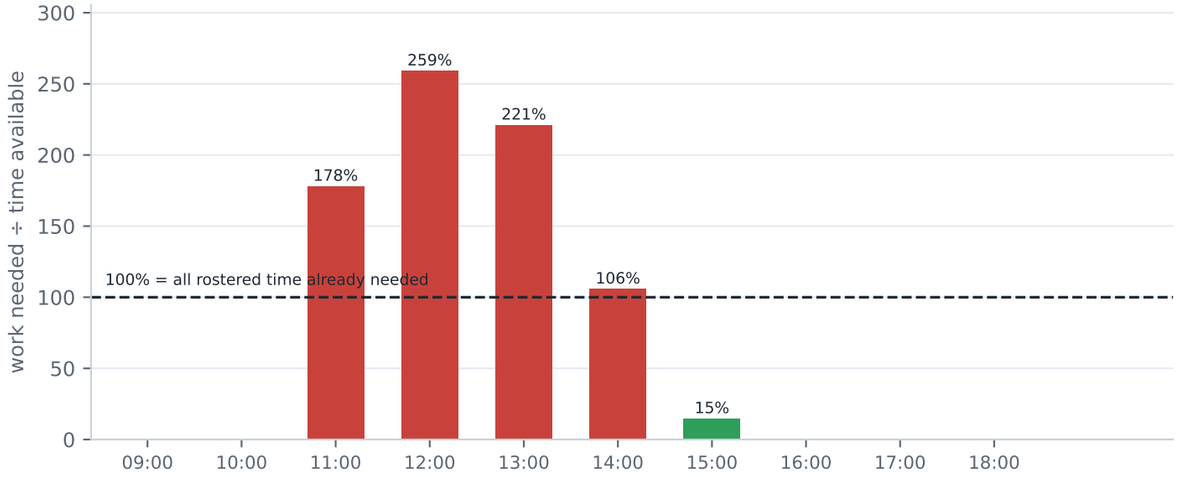

Current: counts by hour

Cut-offs and funds vs head count. Mixes funds with people.

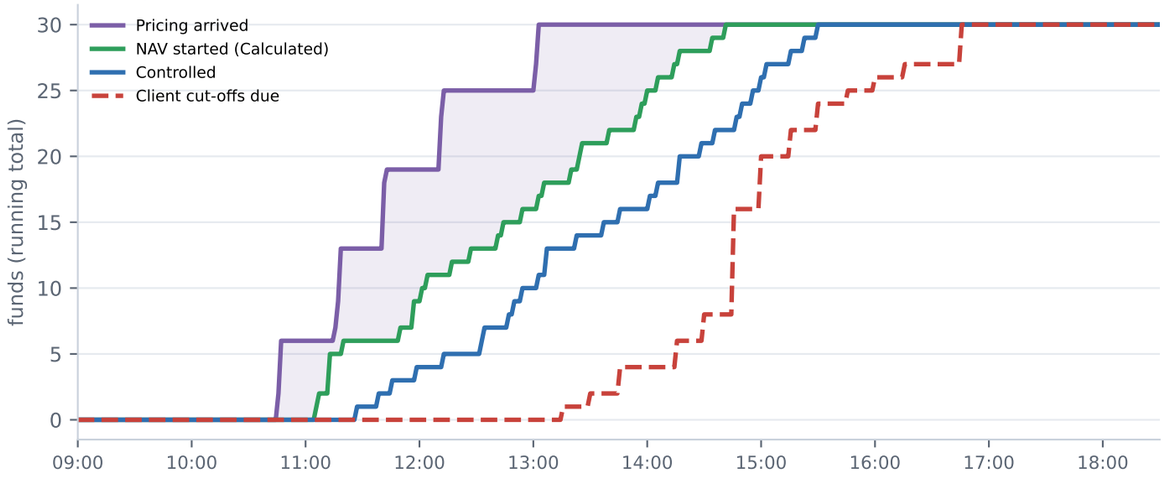

Option 1 · Load %

Minutes of work in hand ÷ minutes of analysts rostered.

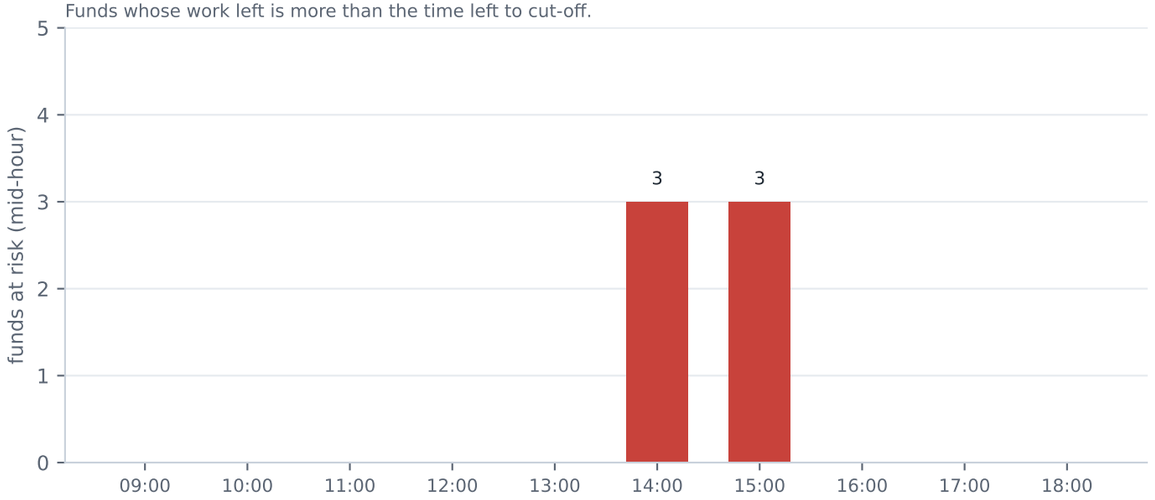

Option 2 · Cumulative flow

Running totals: arrived, started, controlled vs cut-offs due.

Option 3 · Funds at risk

Funds whose work left is more than the time left to cut-off.

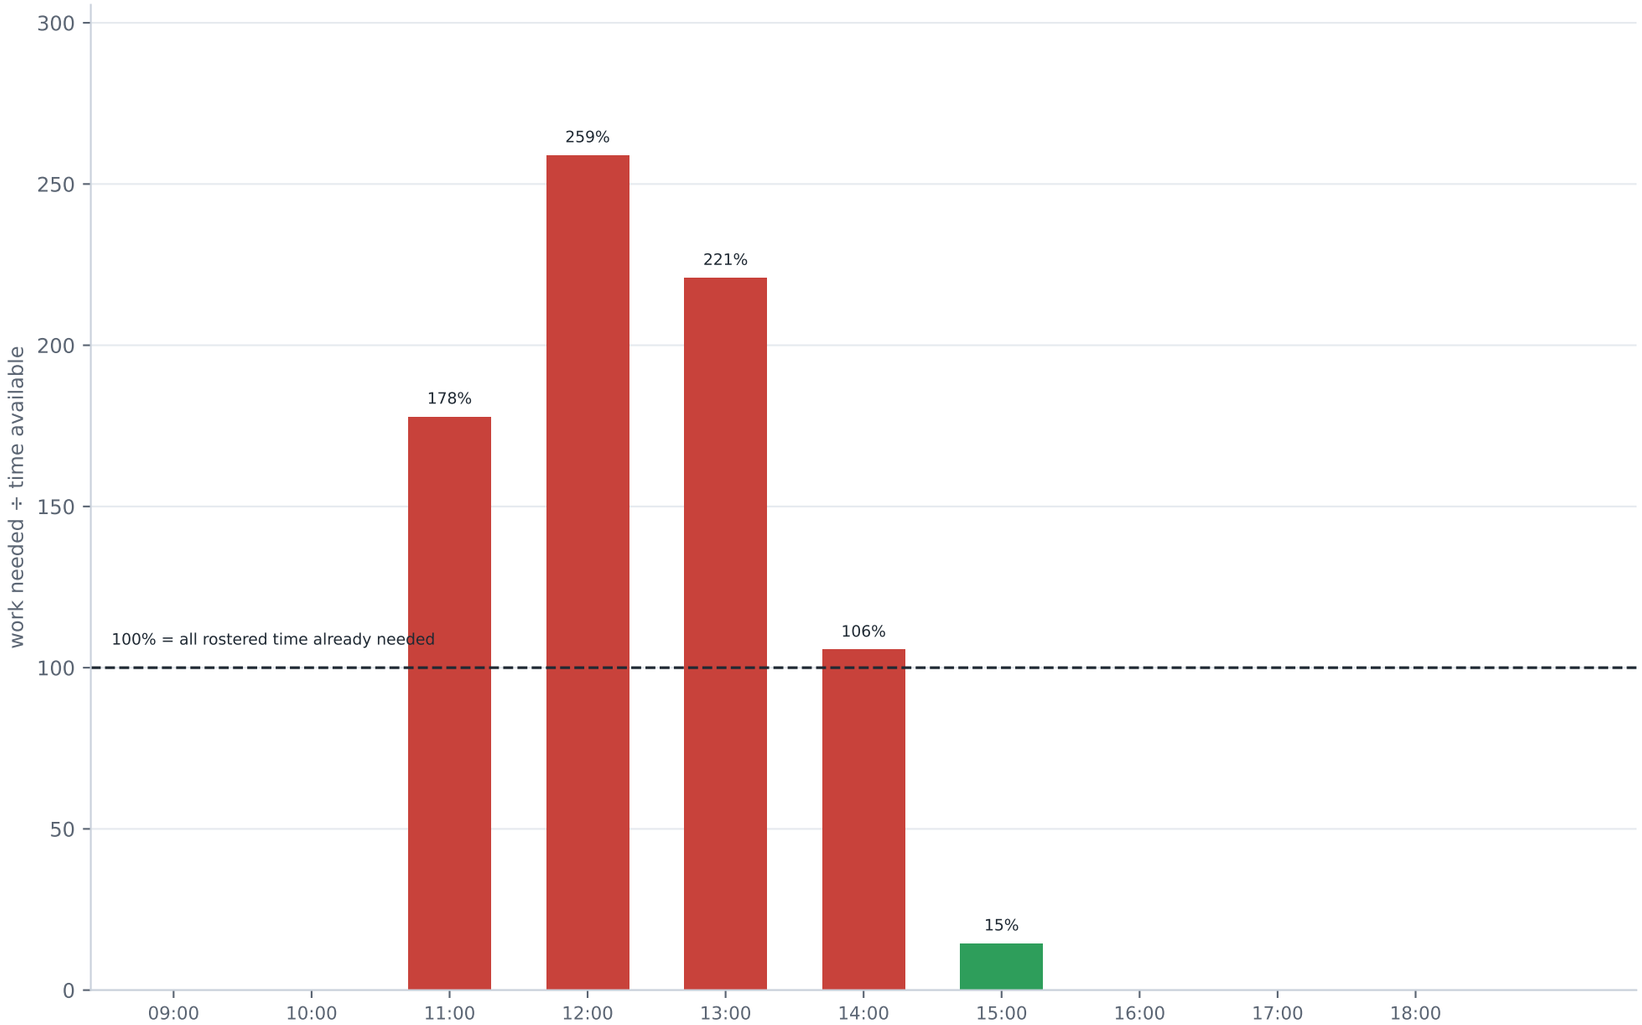

Option 1 · Load % by hour

Date: 31 Aug 2026 · Whole team (6 analysts) · 30 fund-days

MOCKUP — simulated data, not your results

Do we have enough people at that hour?

Budgeted minutes of work in hand during the hour ÷ rostered analysts × 60

How to read it

What it shows

For each hour, the work the team had in hand (funds with pricing, not yet controlled: their remaining recon, NAV and check budget) divided by the minutes of analysts on shift.

Colours

Green under 80%, amber 80–100%, red over 100%: more work in hand than people could do in that hour.

Why it is better

Both sides are minutes, so a 90-minute fund weighs more than a 20-minute one. It peaks before the cut-off cluster, where the pressure really is.

Watch out

Uses budgeted minutes from the weightage, so it is only as right as the budgets. Assumes everyone rostered is available (no leave data).

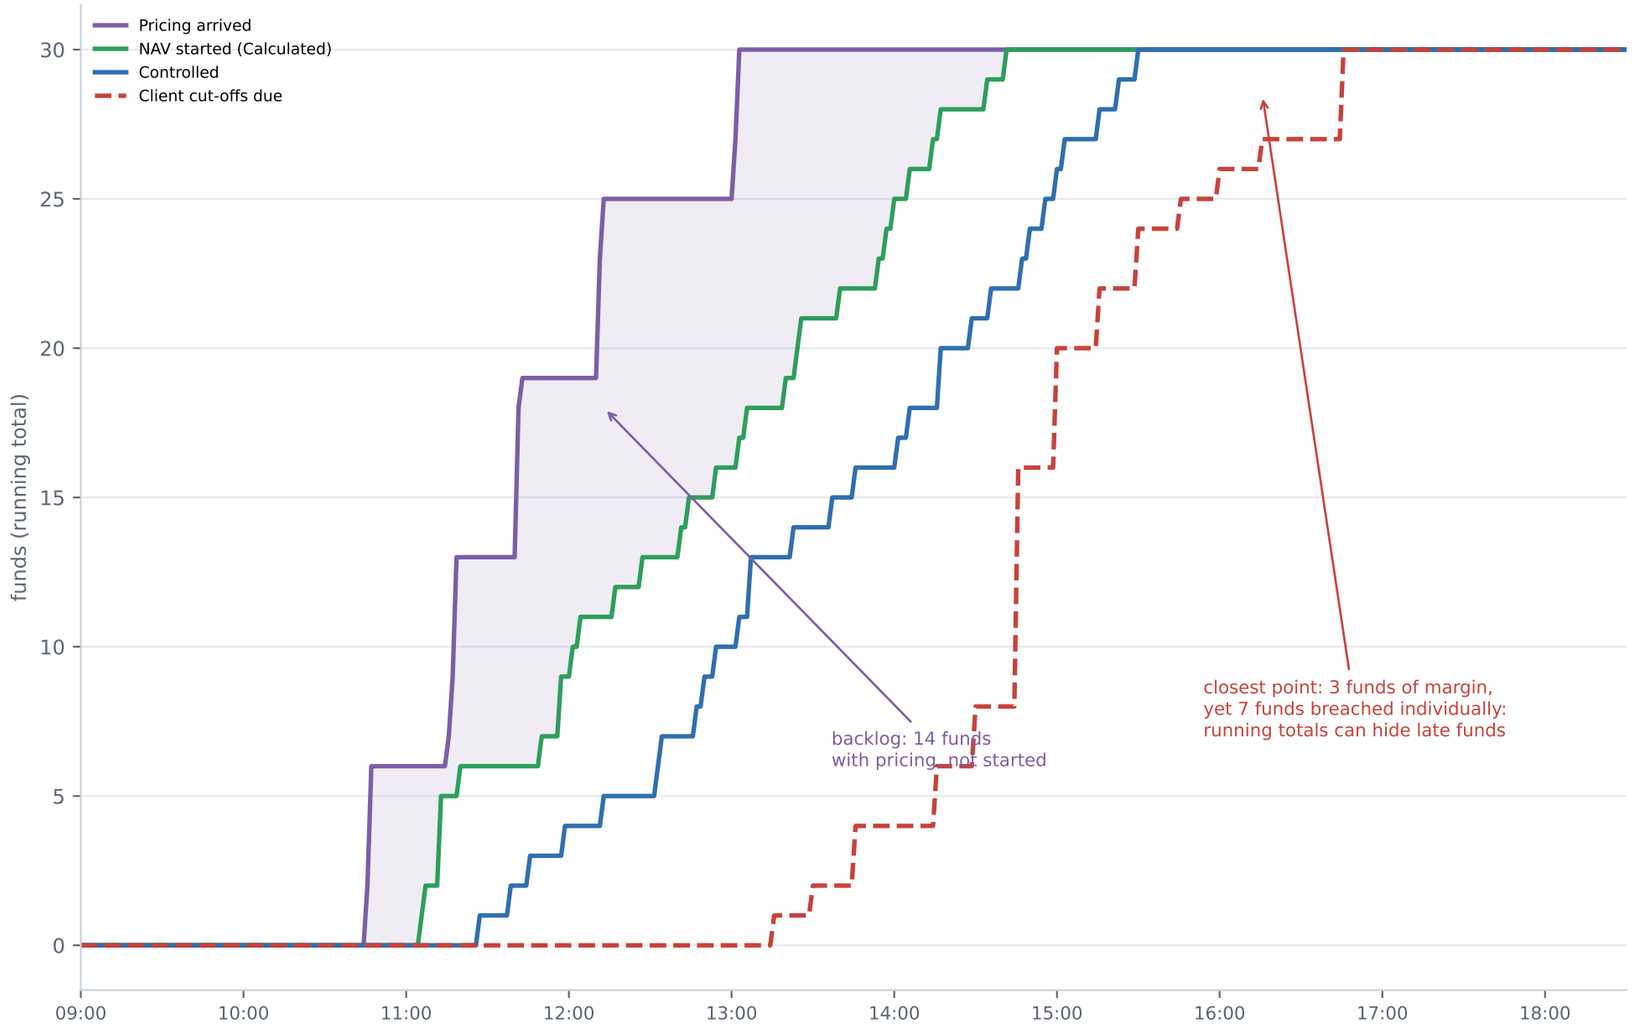

Option 2 · Cumulative flow

Date: 31 Aug 2026 · Whole team (6 analysts) · 30 fund-days

MOCKUP — simulated data, not your results

Is work keeping pace with deadlines?

Running count of funds through each step, against cut-offs due

How to read it

What it shows

Four running totals across the day. Each line climbs by one when a fund reaches that step.

Purple shading

Gap between 'pricing arrived' and 'NAV started': funds with pricing in hand that nobody has started.

Red shading

Where 'controlled' drops below 'cut-offs due': more cut-offs have passed than funds controlled, so breaches are forming. None appears on this day (see Watch out).

Why it is better

Only real timestamps, no reconstruction. The template's Dim_Clock and Arrival_Hr / Start_Hr / End_Hr columns were built for this chart.

Watch out

Running totals can hide individual late funds: on this day 7 funds breached but the lines never cross. It also shows that the team fell behind, not why. Pair it with Option 1 (why) and Option 3 or the timeline (which funds).

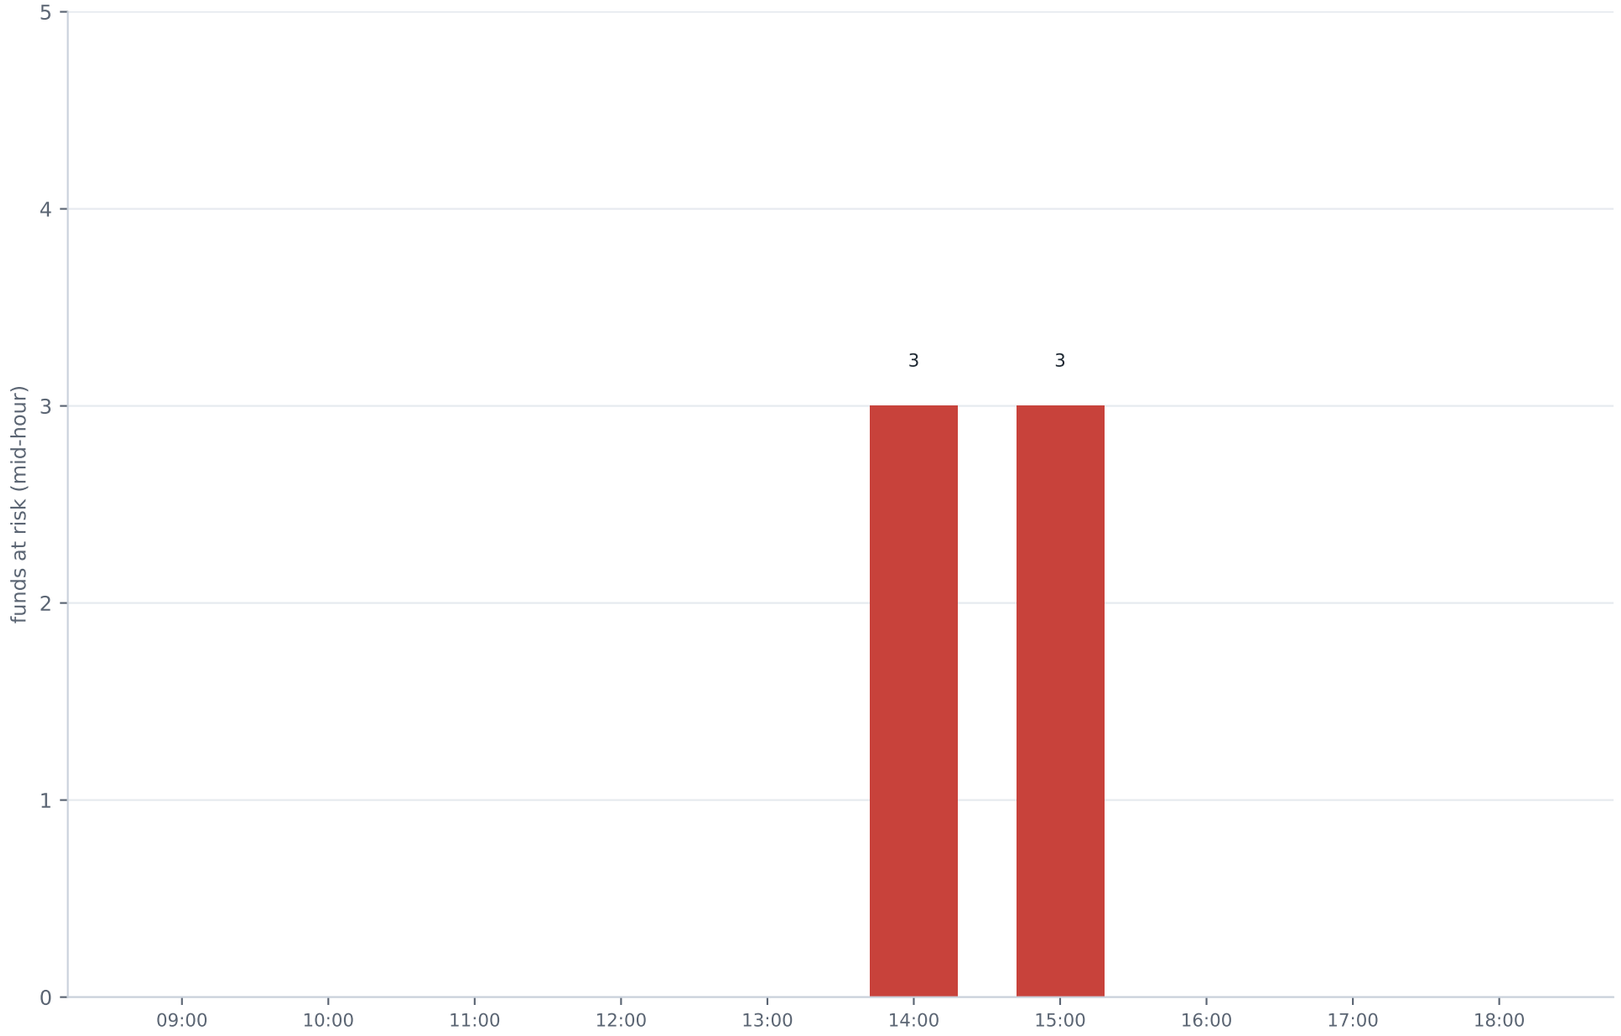

Option 3 · Funds at risk by hour

Date: 31 Aug 2026 · Whole team (6 analysts) · 30 fund-days

MOCKUP — simulated data, not your results

Which hours start to lose funds?

Funds not yet delivered whose remaining work + sign-off tail exceeds time left to cut-off

How to read it

What it shows

At the middle of each hour, the funds that cannot make their cut-off even if worked without a break from now. An early warning, hour by hour.

Table

Lists the funds behind one bar, so the team knows which ones to escalate.

Why it is useful

Very actionable: it names funds, not averages. Same logic as Breach_Class 'Lost on arrival'.

Watch out

A list of problems, not a picture of capacity. Best as a card or drill-down beside Option 1 or 2.

At risk at 15:30 (first 3)

Fund	Cut-off	Work left	Time left
F-1028	15:30	16 min	0 min
F-1029	15:45	21 min	15 min
F-1024	16:00	31 min	30 min

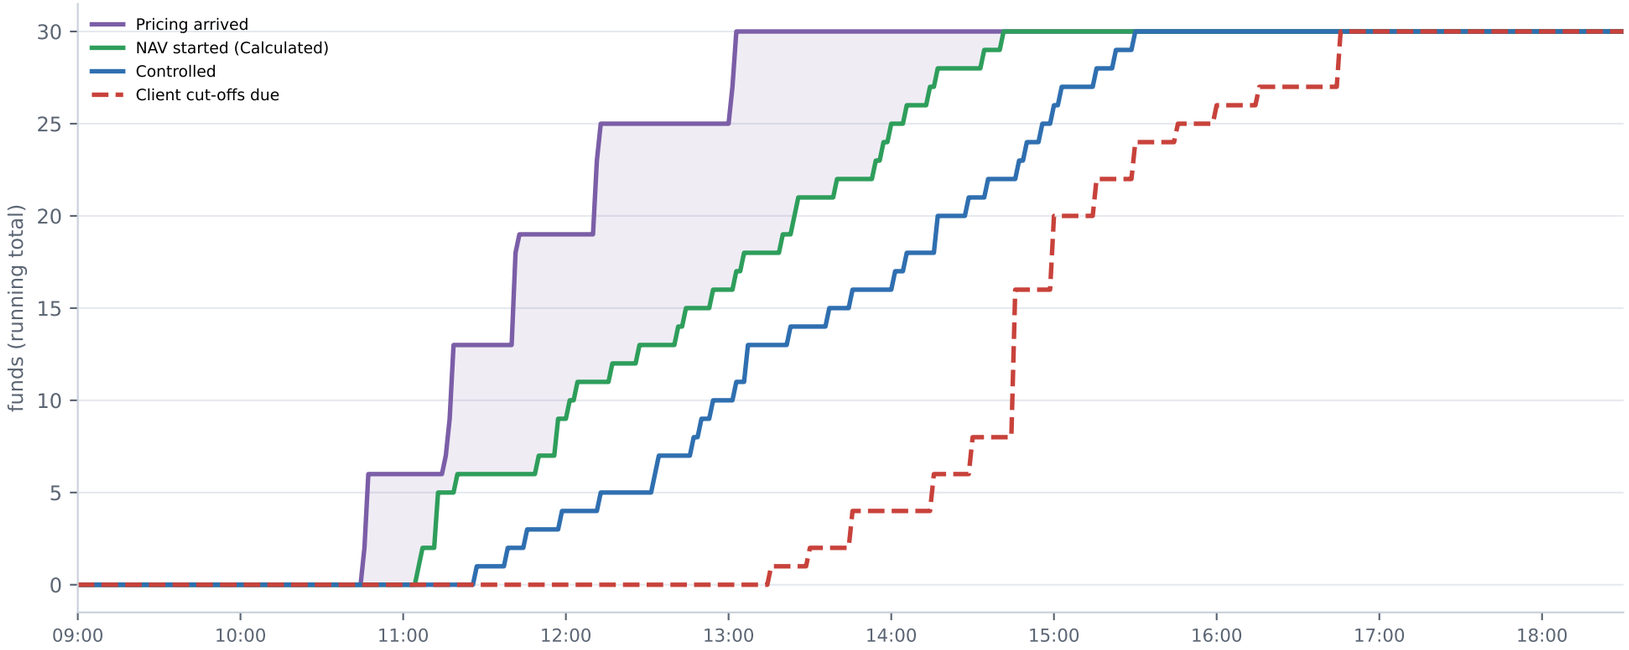

Recommended: cumulative flow with load % underneath

Date: 31 Aug 2026 · Whole team (6 analysts) · 30 fund-days

MOCKUP — simulated data, not your results

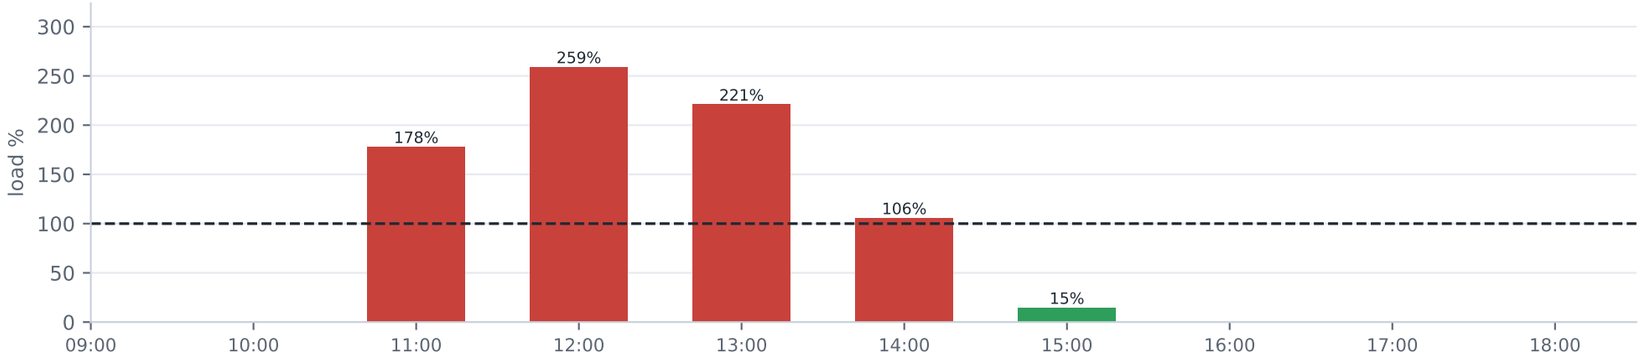

Is work keeping pace with deadlines?

Option 2 · running totals across the day

Do we have enough people at that hour?

Option 1 · work in hand ÷ rostered time

How to read it

Read top to bottom

The top chart shows when the team fell behind; the bar underneath shows whether it was short of people at that hour.

Behind and over 100%

Capacity problem: more work in hand than people could do. Fix staffing or the pick-up order.

Behind but under 100%

Not a people problem: funds were held by data, breaks or approvals. Look at Page 1's other hold-up.

Tooltip

Hovering an hour shows funds awaiting control and funds at risk, so the control workload you asked for stays visible.

Card beside it

Option 3's 'funds at risk now' works as a single number card on the page.
